Muhamad Rafli Shidiq

Junior Fullstack Developer

Jakarta, Indonesia | +62 821-3471-6388 | muhamadraflishidiq@gmail.com
LinkedIn | GitHub | Portfolio

Junior Full Stack Developer with a strong backend focus and hands-on experience building end-to-end web applications using ReactJS, Next.js, Laravel, ExpressJS, Golang, PostgreSQL, and MySQL. Experienced in RESTful API development, authentication and authorization, database design, frontend–backend integration, and application deployment. Contributed as a Backend Engineer in a collaborative development team building a Point of Sale (POS) system, while also developing production-oriented E-Commerce, Project Management, and Student Administration applications. Familiar with Docker, CI/CD, Linux, and Git-based collaborative development workflows.

Projects

Point Of Sale – Cashier Apps [See More] **Sep 2026**

- Developed the backend architecture for a Point of Sale (POS) system using **Node.js**, **ExpressJS**, **Sequelize ORM,** and **PostgreSQL**.
- Designed relational database structures for users, roles, customers, products, categories, brands, inventory, transactions, payment methods, payments, and inventory movements.
- Implemented database migrations and seeders with UUID-based identifiers to maintain consistent and scalable database structures across development environments.
- Built authentication and authorization functionality using JWT, **Argon2** password hashing, role-based access control, and active-user validation.
- Integrated supporting backend technologies including **Redis**, **API rate limiting**, standardized API responses, **Swagger API documentation**, **Docker Compose**, and automated testing with **Vitest**.

E-Commerce – BeliMudah Web App [See More] **July – August 2026**

- Developed a full-stack E-Commerce Web Application using **ReactJS, Go (Golang), ExpressJS, and PostgreSQL**, implementing a modern and scalable application architecture.
- Built responsive and interactive user interfaces with **ReactJS, Vite, and Tailwind CSS**, delivering an optimized user experience across desktop and mobile devices.
- Designed and implemented **RESTful APIs** using Go, including authentication, product management, shopping cart, order processing, and user management features.
- Containerized the application with **Docker**, configured **Nginx** as a web server, and implemented automated build and deployment workflows using **GitHub Actions (CI/CD)** in a **Linux environment**.
- Applied software engineering best practices, including **Git version control**, clean code principles, modular architecture, and collaborative development workflows.

TaskFlow Project Management System [See More] **August 2026**

- Developed TaskFlow Project Management System using **Next.js, TypeScript, Bun, Hono, Prisma ORM, and PostgreSQL** with a separated frontend and **RESTful API** architecture.
- Implemented secure authentication and session management with access and refresh tokens, automatic token renewal, protected routes, persistent sessions, and **Argon2**id password hashing.
- Designed role-based access control for Project Manager (PM), Internal Team, Client, and Admin, supporting project membership, internal team assignment, user administration, and client-specific project visibility.
- Built comprehensive project and task management workflows including task assignment, dependencies, attachments, audit logs, filtering, sorting, pagination, overdue tracking, and optimistic concurrency control to prevent conflicting updates.

- Applied scalable application architecture using **React Query** for server state, **Zustand** for authentication state, centralized API service layers, **Prisma** database management, **Docker containerization**, **OpenAPI** documentation, and automated code quality checks.

Web Company and System Administation Web App [See More] **July – Sep 2025**

- Developed the LPK Ishikawa Nihongo company website and student administration system using **Laravel, PHP, MySQL, JavaScript, Bootstrap**, and responsive web technologies.
- Built most of the application's frontend and backend functionality, including responsive interfaces, online registration, applicant management, document submission, payment records, and announcement management.
- Designed and implemented backend business logic, database structures, authentication, validation, and CRUD workflows to support daily administrative operations.
- Integrated frontend interfaces, backend functionality, and database workflows while collaborating with the project team throughout feature development and implementation.
- Improved application usability, performance, **SEO**, security, and system reliability while supporting maintenance and ongoing feature enhancements.

Experiences

NashTa Group – Sandbox Project – Depok, Indonesia **Sep 2026**

Backend Engineer

Point Of Sale Web App | Sep 2026

- Collaborate as a Backend Engineer within a five-member development team to build a **Point of Sale** (**POS**) system using **Node.js**, **ExpressJS**, **Sequelize ORM**, and **PostgreSQL**.
- Established the backend foundation and development environment, including project dependencies, database configuration, **Sequelize CLI**, environment variables, and supporting backend services.
- Designed and implemented relational database structures, migrations, and seeders for roles, users, customers, categories, brands, products, inventory, transactions, payment methods, payments, and inventory movements using **UUID-based** identifiers.
- Implemented secure authentication functionality using **Argon2** password verification, **JWT-based** authentication, role integration, active-user validation, and standardized API responses.
- Collaborated through **Git** and **GitHub** using feature branches, pull requests, code reviews, and shared ERD/database design to maintain consistent backend architecture across the development team.

Koda Academy – Depok, Indonesia **May – August 2026**

Fullstack Developer

E-Commerce – BeliMudah Web App | July – August 2026

- Developed full-stack web applications independently through intensive project-based learning, handling both frontend and backend development throughout the development lifecycle.
- Managed the end-to-end development process, including application planning, database design, RESTful API development, frontend integration, testing, debugging, and deployment.
- Applied Git and GitHub version control practices including branching, commit management, repository organization, and source code maintenance.
- Troubleshot frontend, backend, database, API integration, and deployment issues independently while improving application stability and maintainability.
- Implemented production-oriented development workflows using Docker, Linux, Nginx, GitHub Actions (CI/CD), and modern deployment practices.

LPK Ishikawa Nihongo Gakkou – **Work From Home** **July – Sep 2025**

Freelance Fullstack Web Developer

Web Company and System Administation Web App | July – Sep 2025

- Worked as the primary Fullstack Web Developer in a small project team, collaborating with a Project Manager and another developer who assisted with selected frontend implementation tasks.
- Developed most of the frontend and backend functionality, including responsive user interfaces, application business logic, database structures, authentication, validation, and system integration.
- Translated business and administrative requirements into functional application features, database workflows, and user interfaces for the company website and student administration system.
- Coordinated with the Project Manager and frontend teammate to manage feature implementation, resolve technical issues, and ensure alignment between application requirements and delivered functionality.
- Handled testing, debugging, deployment, maintenance, and ongoing feature improvements to support reliable day-to-day administrative operations.

Education

Koda Tech Academy – **Depok, Indonesia** **May – August 2026**

Fullstack Developer

- Gained hands-on experience in modern web development using HTML, CSS, JavaScript, React.js, Tailwind CSS, Golang, Docker, Linux, SSH, GitHub Actions (CI/CD), and web server technologies.
- Built and deployed full-stack web applications by implementing responsive user interfaces, RESTful APIs, and modern development workflows.
- Collaborated with cross-functional teams to deliver real-world projects using Agile development practices and Git-based version control.
- Applied software engineering best practices, including clean code, problem-solving, debugging, and version control throughout the development lifecycle.
- Strengthened technical, communication, and teamwork skills through intensive project-based learning and collaborative software development.

Politeknik LP3I – **Bandung, Indonesia** **2022 – 2025**

Informatics Management | Associate Degree (Diploma III*)*

- Journal Publication on the Design of an IT Asset Monitoring Application for the STI Division of PT. PLN (Persero) Central Java Transmission Unit.

Skills

Frontend Development — ReactJS • Next.js • TypeScript • JavaScript • HTML5 • CSS3 • Tailwind CSS • Bootstrap • React Query • Zustand • Responsive Web Design

Backend Development — Laravel • PHP • Golang • ExpressJS • NodeJS • Hono • Bun • RESTful API • JWT Authentication • RBAC

Database & ORM — PostgreSQL • MySQL • Prisma ORM • Sequelize • SQL

DevOps & Deployment — Docker • Docker Compose • GitHub Actions (CI/CD) • Linux • Nginx • SSH

Version Control — Git • GitHub

Development Tools — Visual Studio Code • Postman • REST Client • Figma
